## **CLAIMS**

Addition-curable organopolysiloxane resin composition comprising
(A) 100 parts by weight of an organopolysiloxane resin that has the average compositional formula:

$$R^{1}aR^{2}b(HO)_{c}SiO(4-a-b-c)/2$$
 (1)

 $(R^1 \text{ is } C_{2-10} \text{ alkenyl}, R^2 \text{ is a group selected from unsubstituted or substituted monovalent hydrocarbyl (excluding alkenyl) and alkoxy wherein at least 30 mole% of <math>R^2$  is phenyl, and  $\mathbf{a}$ ,  $\mathbf{b}$ , and  $\mathbf{c}$  are positive numbers that satisfy the following:  $\mathbf{a} + \mathbf{b} + \mathbf{c}$  is 1.0 to 2.0,  $\mathbf{a}$  is at least 0.1, and  $\mathbf{c}$  is at least 0.2) and that contains at least alkenyl, hydroxyl, and phenyl group directly bonded to silicon,

- (B) 20 to 100 parts by weight of an organohydrogenoligosiloxane or organohydrogenpolysiloxane that has the average compositional formula:
- $H_dR^3 eSiO(4-d-e)/2$  (2)

(R<sup>3</sup> is a group selected from unsubstituted or substituted monovalent hydrocarbyl (excluding alkenyl), alkoxy, and hydroxyl group wherein at least 20 mole% of R<sup>3</sup> is phenyl, d is 0.35 to 0.65, and e is 0.90 to 1.70) and that contains at least phenyl group directly bonded to silicon, and (C) an addition reaction-curing catalyst in a catalytic quantity.

- 2. The addition-curable organopolysiloxane resin composition according to Claim 1, wherein  $\mathbb{R}^1$  is vinyl,  $\mathbb{R}^2$  is methyl and phenyl, and  $\mathbb{R}^3$  is methyl and phenyl, and the addition reaction-curing catalyst is a platinum catalyst.
- 25 3. The addition curable organopolysiloxane resin composition according to Claim 1 or Claim 2, wherein the cured product therefrom has a hardness of

WO 2005/062080 PCT/JP2004/019469

60 to 100 as measured by the type D durometer specified in ASTM D2240-86 and the cured product therefrom with a thickness of 4 mm exhibits, during a period of six hours after being withdrawn into a 25°C environment with a relative humidity of 25% after having been previously held for 15 hours at 85% relative humidity and 85°C, a decline in transmittance at 850 nm of no more than 10% from the initial transmittance.

4. The addition curable organopolysiloxane resin composition according to Claim 1, Claim 2, or Claim 3, wherein said composition has a pre-cure viscosity at 25°C of less than 1 Pa·s and provides cured product that has a hardness of 60 to 100 as measured by the type D durometer specified in ASTM D2240-86 and a bending strength as specified in JIS K6911 of at least 30 MPa.
